

Lab-Sheet-6: Structure

➤ *All of the programs must be compiled using your computer, and the identical programs must be handwritten on an A4-sized piece of paper along with output and compiling steps.*

1. Write program to perform following: Define structure named employee with name and age as member variables, make array of size five of employee structure, take values of name and age for all the five employees. Display average age of those five employees.
2. Create a structure named Employee with data members name, address and address. Take the data of 5 employees and display the name of the employee whose salary>10,000.
3. Write a program to create a structure named Employee having members emp_id, emp_name, emp_post, and emp_salary. Read the data of an employee and display it on screen.
4. Modify question number 3 to read information of 10 Employees and display them.
5. Modify question number 3 and display the information of Employees having salary greater than 15000.
6. Write a C program using structure that reads the records of 35 students with members roll, name, address, and marks. Display the record of students who have obtained greater than 250 marks using pointer.
7. Write a program using structure to input rollno, name and percentage of several students and arrange them in descending order by percentage.
8. Write a program using structure to input idno, name and position of several employees and arrange them in alphabetical order by name.
9. Write a program to demonstrate the example of nested structure.
10. Write program to demonstrate the example of passing structure to a function.
11. Write a program using union
12. WAP to read record of 5 employee & print the record of person which have highest & lowest salary.(Include:name,salary,address)
 - 1.WAP to make a record of a student using pointer to structure.(p->name,(*p).name)
 - 2.WAP to make a record of 5 students using structure array and pointer.
 - 3.WAP to use pointer as a member of structure.
 - 4.WAP to pass structure to function (no pointer).
 - 5.WAP to pass structure to function using pointer.
